

Course program

Manage tests and defects with Open Source tools (Squash- TM Mantis)

Duration : 3 days

Language : EN & FR

The implementation of good test practices during the different development phases contributes to the final quality of your applications. This training focuses on Open Source tools dedicated to Tests and their implementation in projects.

Objectives

At the end of this training, you will be able to **establish a process of Test management** including:

- Creation of projects based on risks
- Estimation of Test loads and planning
- Introduction to handling of requirements
- Implementation of statistic and dynamic Test techniques
- Planning of non-functionnal tests and code reviews
- Management of environments, deliveries and test datas
- Implementation of unitary tests, integration, acceptation system
- Responsibilities MOA and MOE
- « Operational » acceptances and « users » acceptances
- Reports and recors of acceptances

Practical exercises

This training combines theory and practices. The different practice exercices have for purpose the illustration of discussed subjects but also a learning of practice for trainees.

Pre-requisites

In order to follow this training, it is important to have a good knowledge of software testing.

Participants

This course is perfect for Poject Managers, managers, testers but also other persons in charge of steering and reporting of tests activites.

Program

1. Generalities

- a. Generalities related to test support tools
- b. Tests reports Open Source tools
- c. Presentation of Squash TM

2. Squash TM for testers

- a. Requirements
 - i. Basics of requirements use in Squash TM
 - ii. Links between requirements and test case
- b. Tests cases
 - i. Basic of requirements use in tests cases for Squash TM
 - ii. Management of test datas
 - iii. Variabilisation of test cases
 - iv. Organisation of test cases
 - v. Links between requirements, test cases, test campaigns and defects
- c. Test campaigns
 - i. Basics of test cases use in Squash TM
 - ii. Execution of test cases in Squash TM
 - iii. Campaign assistant
 - iv. Links between test cases and defects
- d. Defects
 - i. Generalities related to Mantis
 - ii. Managements of defects in Mantis
 - iii. Golden rule of defects report
 - iv. Integration Squash – Mantis
 - v. Other integration
- e. Cross-functionalities
 - i. Research
 - ii. Import / export functionalities
 - iii. Management of versions

3. Squash TM for tests managers

- a. Management of projects in Squash TM
 - i. Creation of projects
 - ii. Customization of a project
 - iii. Management of users
- b. Test planning
 - i. Organisation of campaigns and irations
 - ii. Test cases assignment
- c. Driving and test control
 - i. Foollowing of requirements, test case and test campaigns
 - ii. Driving area
 - iii. Graphics
 - iv. Dahsboard
 - v. Reports
 - vi. Export of customized reports

4. Test automation with Squash

- a. Generalities related to test automation with Squash
- b. Integration of test automation with Squash TM
